PROFESSIONAL SUMMARY

Full Stack & IoT Developer with 3.5+ years of experience building real-time IoT data platforms and production web applications with React.js, Node.js, MongoDB, and ESP32 hardware. Built a GPS vehicle-tracking system and a multi-sensor monitoring pipeline with live WebSocket streaming and threshold-based alerts. Shipped 7+ live projects serving 700+ users. Experienced in REST APIs, JWT authentication, and role-based access control (RBAC). Open to relocating to Germany.

TECHNICAL SKILLS

- **IoT & Embedded Systems:** ESP32 Microcontrollers, IoT Data Monitoring, Real-Time Telemetry, GPS Integration, WebSockets, Dashboard Development
- **Core Web Technologies:** JavaScript (ES6+), Python, HTML5, CSS3, Tailwind CSS
- **Frameworks & Libraries:** React.js, Next.js, Node.js, Express.js
- **Databases & Architecture:** MongoDB, Basic SQL, REST API Development, JWT Authentication, RBAC
- **Tools & Infrastructure:** Git, GitHub, Linux, Postman

PROFESSIONAL EXPERIENCE

Full Stack Developer | Gateway Abroad (2026-present): Designed and deployed the global admissions platform *Ooshasglobal* to securely connect international offices, counselors, and students. Implemented secure REST APIs and robust Role-Based Access Control (RBAC) to ensure strict, role-scoped data isolation across multi-office networks.

Full Stack & IoT Developer | Oxymora Technology Pvt. Ltd. (2022-2026) : Engineered and maintained 5+ full-stack web applications and real-time IoT dashboards, delivering responsive user interfaces for 500+ active users. Developed live industrial IoT solutions featuring GPS vehicle tracking and automated alert monitoring for over 20 ESP32 sensor nodes.

HIGHLIGHTED PROJECTS

Vehicle Tracking Dashboard (IoT Integration)

Built a real-time telematics system tracking the live location and performance analytics of 20+ GPS-connected vehicles. Handled WebSocket-based live data streaming with sub-10-second refresh intervals. Reduced manual check-in times by ~40% for fleet managers through automated alert notifications and interactive map visualizations.

Temperature-Humidity Data Logger (Hardware & Cloud)

Engineered an end-to-end IoT data monitoring pipeline processing real-time environmental data streams from 20+ ESP32 sensors. Optimized MongoDB schemas to log and store continuous, timestamped readings at aggressive 5-second automated intervals. Designed frontend historical trend charts and automated, threshold-based system alerts to track anomalies.

Ooshasglobal (Internal Admissions Management Platform)

Designed and implemented the core REST APIs and secure authentication layers to link international branches. Configured granular role scopes for counseling, enrollment tracking, and university resource mapping across cross-border systems.

Ooshasprep (Online Test-Preparation Platform)

Built a full-stack learning platform supporting automated mocks and modules for exams like IELTS, GRE, and GMAT. Integrated backend systems that optimized content ingestion pipelines, lowering curriculum deployment intervals for content administrators.

EDUCATION: **Master of Science (M.Sc.) in Computer Science** | Rajasthan, Jaipur (2025-present)

LANGUAGES: **English:** Professional Working Proficiency | **Hindi:** Native Speaker
